China panel 2018–2023 at 0.1°
244,306 rows / 55,418 grids before validity filtering
Valid recent-anomaly sample
236,995 rows / 48,843 grids; combined event = EVI OR LAI
Corrected water-context measurement
30 m UTM; centroid distance ≤1 km; JRC 80% / 10 months
Risk and fragility
Summer HDSI tails; risk(high) minus risk(low)
Context contrasts and comparability
Grid intervals; common-covariate M2; supported landscape strata
Spatial uncertainty and sensitivity
1°, 2°, 5° blocks; 10 HDSI indices; 4 thresholds; 6 year omissions
Unfinished analyses remain explicit
Independent baseline; full distances; national within-cell exposure
